

Cambridge International Examinations

Cambridge International Advanced Subsidiary Level

NAME			
CENTRE NUMBER		CANDIDATE NUMBER	
MATHEMATICS			9709/22
Paper 2 Pure Mathe	ematics 2 (P2)		May/June 2017
			1 hour 15 minutes
Candidates answer	on the Question Paper.		
Additional Materials:	List of Formulae (MF9)		

READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name in the spaces at the top of this page.

Write in dark blue or black pen.

You may use an HB pencil for any diagrams or graphs.

Do not use staples, paper clips, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer all the questions.

Give non-exact numerical answers correct to 3 significant figures, or 1 decimal place in the case of angles in degrees, unless a different level of accuracy is specified in the question.

The use of an electronic calculator is expected, where appropriate.

You are reminded of the need for clear presentation in your answers.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [] at the end of each question or part question.

The total number of marks for this paper is 50.

Use logarithms to solve the	equation $3^{x+4} = 5^{2x}$, giving your ansi	wer correct to 3 significant figure
Use logarithms to solve the	equation $3^{x+4} = 5^{2x}$, giving your answer	wer correct to 3 significant figure
Use logarithms to solve the	equation $3^{x+4} = 5^{2x}$, giving your answer	wer correct to 3 significant figure
Use logarithms to solve the	equation $3^{x+4} = 5^{2x}$, giving your answer	wer correct to 3 significant figure
Use logarithms to solve the	equation $3^{x+4} = 5^{2x}$, giving your ans	wer correct to 3 significant figure
Use logarithms to solve the	equation $3^{x+4} = 5^{2x}$, giving your answer	wer correct to 3 significant figure
Use logarithms to solve the	equation $3^{x+4} = 5^{2x}$, giving your answer	wer correct to 3 significant figure
Use logarithms to solve the	equation $3^{x+4} = 5^{2x}$, giving your ans	wer correct to 3 significant figure
Use logarithms to solve the	equation $3^{x+4} = 5^{2x}$, giving your answer.	wer correct to 3 significant figure
Use logarithms to solve the	equation $3^{x+4} = 5^{2x}$, giving your answers	wer correct to 3 significant figure
Use logarithms to solve the	equation $3^{x+4} = 5^{2x}$, giving your answers	wer correct to 3 significant figure
Use logarithms to solve the	equation $3^{x+4} = 5^{2x}$, giving your answers	wer correct to 3 significant figure
Use logarithms to solve the	equation $3^{x+4} = 5^{2x}$, giving your answers	wer correct to 3 significant figure
Use logarithms to solve the	equation $3^{x+4} = 5^{2x}$, giving your ans	wer correct to 3 significant figure
Use logarithms to solve the	equation $3^{x+4} = 5^{2x}$, giving your answers	wer correct to 3 significant figure
Use logarithms to solve the	equation $3^{x+4} = 5^{2x}$, giving your answers	wer correct to 3 significant figure
Use logarithms to solve the	equation $3^{x+4} = 5^{2x}$, giving your answers	wer correct to 3 significant figure
Use logarithms to solve the	equation $3^{x+4} = 5^{2x}$, giving your answers	wer correct to 3 significant figure

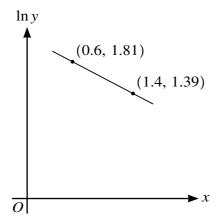

(i) By sketching a suitable pair of graphs, show that the equation

The variables x and y satisfy the equation $y = \frac{K}{a^{2x}}$, where K and a are constants. The graph of lny
against x is a straight line passing through the points $(0.6, 1.81)$ and $(1.4, 1.39)$, as shown in the diagram. Find the values of K and a correct to 2 significant figures.

	63 102 20 70
	$6x^3 + 13x^2 - 33x - 70$
	and hence factorise the expression completely.

) ((i) Find $\int \left(\frac{4}{2x+1} + \frac{1}{2x}\right) dx.$	[
(i	ii) Hence find $\int_{1}^{4} \left(\frac{4}{2x+1} + \frac{1}{2x} \right) dx$, giving your answer in the form $\ln k$.	Į

8

The diagram shows the curve with parametric equations

$$x = 2 - \cos 2t$$
, $y = 2\sin^3 t + 3\cos^3 t + 1$

for $0 \le t \le \frac{1}{2}\pi$. The end-points of the curve are (1, 4) and (3, 3).

(i) Show	w that $\frac{\mathrm{d}y}{\mathrm{d}x} = \frac{3}{2}\sin t$	$-\frac{9}{4}\cos t$.		[5]
